

# Daniel (Haolan) Zuo

## EDUCATION

<i>M.S. in Computer Science, Yale University</i> , New Haven, CT	May 2024
<i>B.S. in Computer Science &amp; B.S. in Finance, Sichuan University</i> , Chengdu, China	Jun 2023

## PROFESSIONAL EXPERIENCE

<b>Meituan</b>	Beijing, China
<i>Machine Learning Engineer Intern</i>	May 2023 – Aug 2023
<ul style="list-style-type: none"><li>Part of a 3-person MLE team in Mobike division, driving the algorithmic optimization of shared e-bike logistics</li><li><b>Lifted profit by 7%</b> in end-to-end pipeline, by pioneering graph neural networks for <b>bike station recommendations</b></li><li>Created a <b>data ETL pipeline</b> with <b>PySpark</b> and <b>SQL</b> to transform spatio-temporal tabular data into a graph structure, yielding a large-scale heterogenous graph dataset (300K nodes 20M edges) ready for comprehensive network analysis</li><li>Achieved <b>72% Acc@500</b> in component-specific testing, by building scalable GNN models using Tensorflow</li><li><b>Deployed</b> the model as a service using <b>Docker</b> and <b>Flask</b>, into Java heuristic-search order system via RESTful APIs</li><li>Facilitated cross-team collaboration by authoring technical blogs, leading code reviews and sharing best practices</li></ul>	
<b>Johns Hopkins University - Center for Bioengineering Innovation and Design</b>	Baltimore, MD
<i>Machine Learning Engineer Intern</i>	Jun 2022 – Sep 2022
<ul style="list-style-type: none"><li>Developed iOS and watchOS apps to collect and transmit sensor data <b>using Swift</b> with a bioengineering team</li><li>Established a <b>data pipeline</b> to structure and export timestamped sensor data from mobile <b>HealthKit</b> to a local server</li><li>Achieved <b>84% accuracy</b> in classifying patient activity by building LSTM in Keras for a spine deformity clinical trial</li><li><b>Deployed</b> the model as a service on a <b>local server</b> with Flask for batch inference, enhancing <b>data privacy</b></li></ul>	
<b>Yale Biotech Club – Bexorg Inc.</b>	New Haven, CT
<i>Data Scientist Externship</i>	Oct 2023 – Nov 2023
<ul style="list-style-type: none"><li>Enhanced high-frequency signal data integrity via <b>data cleansing</b>, feature selection, and downsampling using <b>Pandas</b></li><li><b>Uncovered key causal relationships</b> among controllable and measured variables <b>using scikit-learn</b> for random forest, mutual information, and Bayesian networks, delivering <b>visual reports</b> to optimize brain cultivation experiment</li></ul>	

## SELECTED PROJECTS

<i>Automated Fact-Checking System Using Knowledge Graph-Enhanced RAG</i>	Jul 2024 – Present
<ul style="list-style-type: none"><li>Improved retrieval and fact-checking quality by <b>innovating</b> a two-stage knowledge graph-enhanced RAG technique</li><li>Boosted adaptability of retrieve-and-verify system via <b>joint finetuning</b> of the retriever and pretrained language model</li><li>Increased transparency in decision-making by providing reference-supported justifications alongside predicted veracity, making the system more reliable for real-world use</li></ul>	
<i>Scalable Web Chatbot for Proprietary Data Question Answering with Voice Interaction</i>	May 2024 – June 2024
<ul style="list-style-type: none"><li>Delivered a seamless question-answering experience based on user proprietary data by developing a full-stack web chatbot, integrating Retrieval-Augmented Generation (RAG) with <b>LangChain</b> and <b>Chroma vector databases</b></li><li>Enhanced user engagement through intuitive voice interaction capabilities by integrating TTS and STT <b>cloud services</b></li><li>Ensured efficient, scalable performance by engineering <b>serverless deployment</b> using Docker in IBM Cloud</li></ul>
